1. EXECUTIVE SUMMARY

bioBOI is an innovative blockchain project that bridges Artificial Intelligence (AI) with Decentralized Science (DeSci). By leveraging the power of blockchain technology, bioBOI aims to decentralize scientific research, making it transparent, accessible, and equitable. Our platform empowers researchers, innovators, and investors to collaborate on groundbreaking projects while benefiting from an ecosystem driven by Molecular NFTs, \$bioBOI tokens, and decentralized governance.

2. INTRODUCTION

Scientific research has long been hindered by centralized funding models, lack of transparency, and limited accessibility. bioBOI introduces a decentralized platform where scientists and researchers can share, validate, and monetize their work while fostering collaboration across global communities.

3. PROBLEM STATEMENT

Current scientific research systems face:

- **Centralization:** Limited access to funding and resources.
- **Transparency Issues:** Lack of trust in research publication and validation processes.
- **Inequitable Distribution:** Disparities in access to tools, datasets, and scientific breakthroughs.

bioBOI addresses these challenges by combining blockchain, AI, and decentralized governance to create an ecosystem where innovation thrives.

4. BIOBOI

VISION

The BioBoi mascot is a brown bear wearing glasses and a green jacket, with its arms raised in celebration. It is surrounded by falling green coins. Below the mascot is the word "bioBOI" in a green, stylized font. In the center of the image, there is a large green logo consisting of two stylized, interlocking shapes that resemble the letters "G" and "B".

bioBOI

To create a decentralized, transparent, and equitable scientific ecosystem where AI and blockchain technology empower global collaboration and innovation.

TEAM \$bioBOI

5. CORE FEATURES

Meet bioDEX

- No more guessing games. BioDex helps you check if a token is safe before you jump in.

Our honeypot checker scans contracts in seconds, making sure your next trade is clean, secure, and scam-free.

Think of it as your loyal crypto buddy who always double-checks before you hit “buy.”

\$Create Tokens Like a Pro

- Launch your own token in minutes — no code, no stress.

Whether you’re starting a meme coin, a community project, or testing ideas, our Token Creator gives you all the tools to make it real, fast, and fun.

Blockchain building has never felt this easy.

DeSci Tools

- Decentralized platform for sharing and validating research.
- AI-powered tools for data analysis and molecular simulations.

DAO Governance

- Community-driven decision-making mechanism.
- Token holders shape the future of the platform, including funding decisions and feature rollouts.

6. BIOBOI

ECOSYSTEM COMPONENTS

1

Molecular NFTs: Each NFT serves as a gateway to unique datasets, AI-curated scientific models, or collaborative research opportunities.

\$bioDEX:

- Utility: BioDEX, bioTrend, Token Creator
- “bioBOI mixes humor, analytics, and creativity to make DeFi accessible to everyone.

We’re here to keep you safe, informed, and maybe even make you smile while you trade.”

2

3

DeSci Platform: A decentralized platform that empowers researchers to collaborate, validate, and monetize their findings.

DAO Governance: Decentralized governance that allows stakeholders to influence the platform’s direction and funding allocation.

4

7. TECHNOLOGY

STACK

1

Blockchain: Built on Ethereum for scalability, security, and decentralization.

2

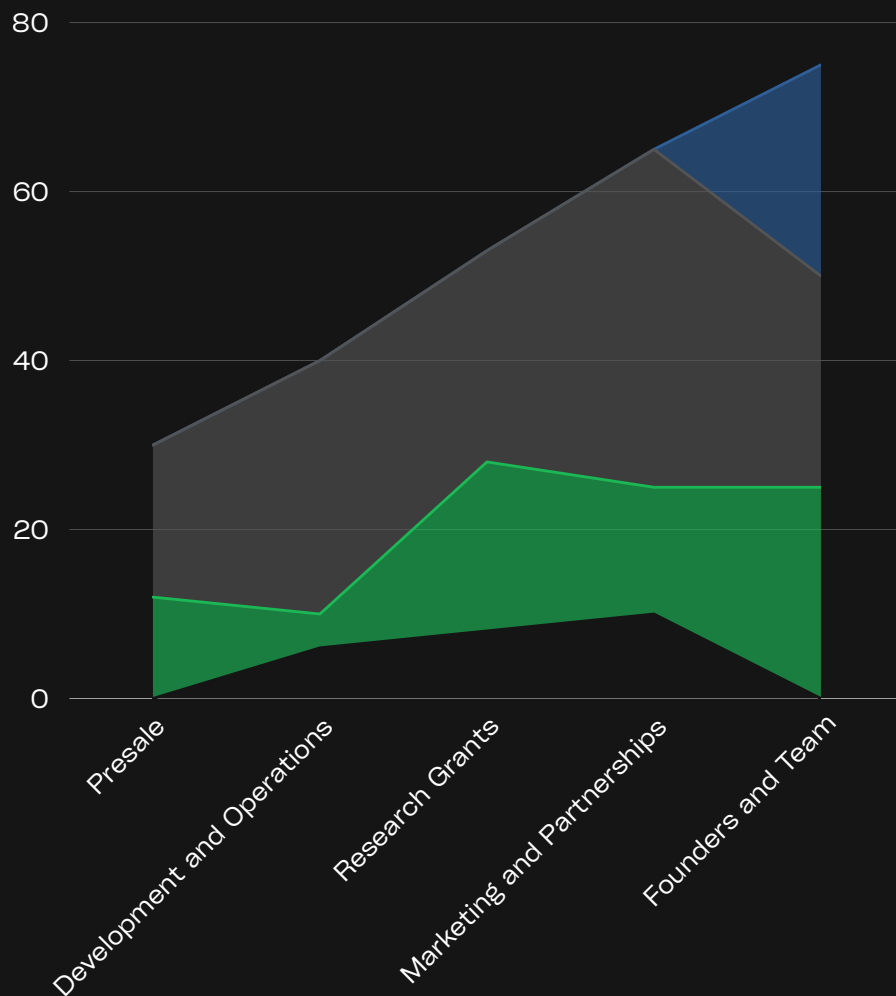

AI Integration: Custom machine learning models for molecular simulations and data analysis.

3

Smart Contracts: Enable secure and transparent staking, governance, and funding mechanisms.

8. TOKENOMICS

Marketing and
Partnerships

Presale

Liquidity

9. ROADMAP

1

Token Launch (Q3 2025)

- Launch \$bioBOI token on decentralized exchanges.
- Expand community through airdrops and campaigns.

NFT Launch (Q1 2026)

- Launch Molecular NFTs on OpenSea.
- Introduce staking mechanisms for \$bioBOI rewards.

2

3

DeSci Platform Launch (Q2 2026)

- Launch decentralized platform with AI tools and dataset access.
- Integrate peer-review and collaboration mechanisms.

Global Integration and DAO (Q2 2026)

- Establish partnerships with academic institutions and biotech firms.
- Launch DAO governance for research funding and platform decisions.
